ERC-20 token launching on Base Mainnet via the Rainbow Token Launcher

Contents

$XnCo is an ERC-20 token launching on Base Mainnet via the Rainbow Token Launcher, following the launcher's standard allocation model with roughly 94% of supply locked into the liquidity pool at launch. Governance is decided by the top 25 token holders. The protocol distributes monthly 1/1 animated art NFT airdrops to eligible holders. This document mirrors the technical specification published on the live site.

1. Architecture

$XnCo is an ERC-20 token launching on Base mainnet through the Rainbow Token Launcher, which creates the token contract and seeds the liquidity pool automatically. Supporting contracts for NFT art and airdrops are built on OpenZeppelin libraries.

- Chain: Base Mainnet (Ethereum L2)
- Standard: ERC-20
- Launchpad: Rainbow Token Launcher
- Liquidity: Pool created and seeded at launch
- Total supply: Set by the Rainbow Token Launcher at launch

2. Tokenomics

$XnCo follows the Rainbow Token Launcher allocation model. Nearly all supply is locked into the liquidity pool at launch, with small allocations for the community airdrop, the creator, and Rainbow's community reserve. A 1% fee on each trade is split 50/50 between the creator and the launcher protocol.

Bucket	Share	Notes
Liquidity Pool	~94%	Locked at launch
Over the Rainbow	5%	Rainbow community reserve
Community Airdrop	0.5%	Rainbow users & community
Creator	0.5%	Xebb n' Co.

3. Airdrop Mechanics

Monthly NFT art airdrops use an on-chain random selection process seeded from block data. Eligibility requires a minimum balance of 10,000 $XnCo at the snapshot block. A future upgrade path to Chainlink VRF is planned for stronger randomness guarantees as the protocol matures.

- Frequency: Monthly (1st of each month)
- Selection: On-chain block-seeded random (VRF upgrade planned)
- Min. balance: 10,000 $XnCo at snapshot
- Recipients per drop: 50–200 random holders
- Art: 1/1 animated optical-illusion NFTs rendered in SVG/CSS

Randomness note: block-derived randomness is susceptible to miner/validator manipulation. A commit-reveal or Chainlink VRF migration is tracked for the post-launch roadmap and is recommended before high-value drops.

4. Security

The $XnCo token contract is created by the Rainbow Token Launcher using its standard deployment. Supporting NFT and airdrop contracts are built on OpenZeppelin's audited libraries and covered by an internal test suite. No third-party audit of the supporting contracts has been completed yet — this is an early-stage project and should be treated accordingly.

- Token contract: Rainbow Token Launcher standard deployment
- Supporting contracts: OpenZeppelin (audited library)
- Test coverage: Internal Foundry test suite
- Third-party audit: Not yet completed
- Admin key: Single key at launch → multi-sig planned

Risk: Early-stage — use at your own discretion. No mainnet contract change should be considered final until a third-party audit and multi-sig governance are in place.

5. Governance

Governance is decided by the top 25 $XnCo token holders. The holder council votes on art themes, airdrop parameters, treasury actions, and protocol direction. Council membership is dynamic — standings update as on-chain balances change.

- Council: Top 25 $XnCo holders
- Membership: Dynamic, by on-chain balance
- Scope: Art themes, airdrops, treasury, protocol direction
- Voting period: 72 hours
- Snapshot: Balances at vote open

6. Contracts

The $XnCo token contract will be created by the Rainbow Token Launcher on Base Mainnet at launch — the address and BaseScan link will be published on the official site. Supporting art and airdrop contracts are currently deployed on Ethereum Mainnet and verified on Etherscan.

Contract	Address
$XnCo Token (Base)	TBA — created by Rainbow Token Launcher at launch
XEBBArtNFT	0x770D89B65f59f3b9095D998Ed6700Ce500B985b4
XEBBAirdrop	0x2a065623C555bAFbA2870fEeC93e4353405f8010

Deployer: 0x40e8A78ED179Be1B2302c5437F19F9d9bE258223. Always verify contract addresses on the official site before interacting.

7. Regulatory Notice & Disclaimer

This whitepaper is for informational purposes only and does not constitute an offer to sell or a solicitation of an offer to buy any security, commodity, or token in any jurisdiction. $XnCo is a utility token for community participation, art airdrops, and community governance by its top holders. It is not intended as an investment, security, or financial instrument.

Token launches, airdrops, and rewards can have regulatory implications in the United States and other jurisdictions. The classification of digital assets as securities, commodities, or property depends on specific facts and applicable law. Xebb n' Co. makes no representation regarding the legal or tax treatment of $XnCo in any jurisdiction. Prospective participants should consult qualified legal, tax, and financial advisors before acquiring or interacting with the token.

No warranty. The protocol is provided "as is" without warranty of any kind. Smart contract interactions are irreversible; users are solely responsible for their own due diligence, wallet security, and understanding of the risks involved.
